Unsurpassed Reversible Finish
- Matte smooth finish on one side
- Realistic wood texture on reverse

Straight, Square & Strong
- Technologically advanced
- Stringent manufacturing standards guarantees true, consistent boards

Instructions for the proper storage, handling, installation, and maintenance of ARTRIM PVC Trim Board.

The ARTRIM PVC Trim Board is an engineered product manufactured under the highest quality standards. The points below explain the proper storage, handling, installation, and maintenance of this product.

Storage
ARTRIM PVC Trim Boards must be stored, well supported on a flat and level surface.

Installation
Handle carefully to avoid damage to product. This exterior trim product is for non-load bearing applications. ARTRIM PVC Trim Boards must be installed above the ground. It is recommended that the ARTRIM PVC Trim Boards not be directly exposed to the elements (soil, rain, water, ice, snow or the sun) for prolonged periods of time without a proper top coat being applied.

Painting & Finishing
ARTRIM PVC Trim Board is not intended to be used as a finished coated product. A final top coat is recommended after the installation with exterior 100% Acrylic topcoat, according to industry best practices. The surface must be free of dust, dirt or mildew before painting. Wash away any foreign material with water and a mild detergent, and allow the surface to dry before painting. Apply topcoat according to manufacturer's specifications, recommended spread rates and number of coats. DO NOT use paints with vinyl-based resin combinations. Brush application of primers and top coats ensures best coverage and protection. All PVC joints should be mitered and glued. Cut, drill, and router the same as lumber.

Maintenance
To ensure tight joints and proper waterproofing, caulked areas should be checked to guard against water intrusion.

Exterior Paint:
Exterior paint is required to protect the product. Follow recommendations of the topcoat supplier and best industry practices for the best performance. Do not paint dark colors.

Cleaning:
Remove dirt from the ARTRIM PVC Trim Board with a mild detergent, a gentle brush and a garden hose. Never use a pressure washer to clean the trim. Excessive water pressure can cause damage to the surface of the PVC painted trim boards.

Fasteners:
For optimal exterior performance, use high quality (stainless steel or hot-dipped galvanized) for best results.
